PLASTIBLOW AT PLASTIMAGEN 2026

At **Plastimagen 2026**, taking place in Mexico City from **10 to 13 November 2026**, Plastiblow will be exhibiting in the **Italian Pavilion (Booth No. 436)**. As one of the leading meeting points for the plastics industry in Latin America, the event will provide Plastiblow with an opportunity to showcase its advanced range of fully electric extrusion and coextrusion blow moulding machines, combining high technology with low energy consumption and designed for the production of containers of up to 30 litres.

The range has recently been further enhanced with the innovative **EVO line**, which stands out for its ergonomic design, easy accessibility, compact dimensions and attractive appearance, ensuring greater operational efficiency and maximum ease of use.

Plastiblow continues to strengthen its commitment to environmental sustainability through the development of multilayer coextrusion technologies suitable for processing recycled materials in the production of plastic containers. Thanks to Plastiblow technology, the recycled material can be encapsulated between two layers of virgin material, preventing any contact with the contents while preserving the external aesthetic appearance of the finished container.

Plastiblow is also further consolidating its presence in the local market through its service centre, **Plastiblow de México**, established to provide customers with faster, more efficient and closer-to-home after-sales technical support, tailored to their specific needs.
